BCS RECYCLING SPECIALISTS RECEIVES ISO 14001 AND R2 CERTIFICATIONS

(Canoga Park, Calif.) March 9, 2011 -- San Fernando Valley-based BCS Recycling Specialists received its ISO 14001 and Responsible Recycling (R2) certifications from Perry Johnson Registrars, Inc. in February 2011. The new certifications confirm the company's enhanced environmental management system that will further benefit BCS clients of all sizes and service needs.

With over 100,000 square feet of combined facility space and a testing/repair center among its five nationwide hubs, BCS Recycling Specialists specializes in innovative solutions to eliminate environmental liability and provide maximum recoveries for scrap, obsolete, EOL, and surplus materials. In business since 1988, BCS works with companies ranging from small to multi-billion dollar corporations, to provide complete reverse logistics solutions, asset management, re-marketing and recycling services.

"Prior to our certifications, BCS already had an environmental management system in place with strict recycling and material disposal regulations but adding the ISO 14001 and R2 certifications will provide an added measure of security and value for new and existing clients," says BCS owner, Jonathan Manhan. "Our goal remains to provide landfill-free, safe and responsible asset management and recycling services to all businesses in an easy and cost effective manner."

ISO 14001 is part of a family of 16 international ISO 14000 standards designed to assist companies in reducing their negative impact on the environment (Federal Facilities Council Report 1999). ISO 14001 was originally developed to assist companies in reducing their environmental impact, but businesses also experience other economic benefits including reduced operating costs, increasing long-term business viability, reduction of legislative and regulatory complications, accessibility to international business interactions and favorable consumer impressions.

Responsible Recycling Practices for or Electronics Recyclers (R2) is a new set of standards developed by the EPA with key groups of stakeholders such as recyclers, equipment manufacturers, representatives of state government, trade associations, and public interest groups.

Perry Johnson Registrars, Inc. company provides independent, 3rd-party quality and environmental management system audits to standards such as Responsible Recycling, Rios, SQF, OHSAS, ISO and more.

Since 1988, California-based BCS Recycling Specialists has specialized in innovative solutions to eliminate environmental liability and provide maximum recoveries for scrap, obsolete, EOL, and surplus materials. EPA approved, landfill-free, and ISO 14001/R2/Rios certified, the company delivers reliable, drama-free recycling and asset management solutions.
